

**NEW VERSION pdfMachine 9.2 now available. Get your FREE UPGRADE now!**

pdfMachine 9.2 is a windows print driver that produces quality PDF files in seconds and preserves the integrity of your original documents. NEW pdfMachine 9.2 has no complicated options. If you can print from a windows application then you can use pdfMachine! Great value for money at US\$49 per licence or **FREE** if you have a previous version of pdfMachine.

## **pdfMachine Features!**

pdfMachine carries no installation costs. No training is required. No complicated configuration options and it runs on **Windows** 95/ 98/ Me/ NT/ 2000/ XP. For **network installations** pdfMachine now supports "point & print" installation and can be installed like any other network printer.

Quickly convert your MS Office documents to PDF's using the **pdfMachine MS Office toolbar** created on your Word, Excel, PowerPoint and Outlook windows. pdfMachine supports and automatically generates PDF bookmarks from Word and PowerPoint documents. **PDF bookmarks** – appear as editable 'hyperlinks' in a content table on the left of your PDF file. Simply click on a bookmark to be taken directly to that page in the PDF!

PDF **hyperlinks** are now auto-generated from **web URL's** and email addresses too.

pdfMachine integrates **MAPI compliant** mail clients (e.g. MS Outlook) to ease the sending of PDF's via email. **Mail Merge** parameters such as "email to" and "email subject" can be dynamically "parsed" out of a PDF file for automatic email sending. This makes it great for integration with legacy applications that operate in "batch" mode

Use the **pdfScanMachine** utility to scan your documents directly to PDF format

**PDF Editing and Fonts** are supported too! Easily insert, append, rotate, delete and rearrange pages within a PDF file. The PDF files produced by pdfMachine are small in comparison to original documents additionally pdfMachine 9.2 supports all Asian languages, Hebrew, Arabic and many others!

Now you can use existing PDF files as you would **pre-printed stationery**. The first page of an existing PDF file is merged on to every page of your new PDF file. This is a great way to get legacy applications producing customised PDF files. Also, textual **watermarks** can also be placed on each page of your PDF file, and **N-Up Printing** allows you to shrink several pages onto one page (saving paper) acting as a great booklet-making feature!

**pdfMachine** implements PDF 40 bit and 128 bit encryption. Documents can be password protected - permissions for printing/ copying/ modifying can be awarded.

Download your **FREE trial version** today and see the difference new pdfMachine 9.2 can make. Or visit [www.pdfMachine.com](http://www.pdfMachine.com) to find out more.
